APPARATUS FOR PREPARING POLYOLEFIN PRODUCTS AND METHODOLOGY FOR USING THE SAME

ABSTRACT OF THE DISCLOSURE

Apparatus for olefin polymerization includes a plurality of shell and tube olefin

polymerization reactors, each of which has an olefin polymerization reaction mixture inlet

connection and a crude polyolefin product outlet connection. Each reactor is equipped with a

recirculation system including a pump arranged to circulate a reaction mixture through the tube side

of the reactor independently of the introduction of olefin polymerization reaction mixture into the

reactor. The apparatus also includes an inlet reaction mixture distribution manifold and an outlet

polymerization reaction mixture collection manifold interconnecting the reactors for operation in

parallel. The apparatus also includes catalyst composition and catalyst modifier inlets for each

reactor arranged such that a catalyst modifier to may be introduced into each reactor at a rate which

is independent of the introduction of catalyst composition. The apparatus further incorporates a

crude polyolefin product catalyst removal and wash system including a plurality of settler vessels,

associated piping and an inlet for a catalyst killing agent. This crude polyolefin product catalyst

removal and wash system operates to receive crude polyolefin product from the crude polyolefin

product outlet and remove residual catalyst therefrom.
